

A method, process and computer program to automatically create a customized three-dimensional nail object

Abstract

The invention is a method, process and computer program to automatically create a customized three-dimensional artificial nail object based upon an actual/existing digitized nail surface. This particular invention generates the overall desired three-dimensional nail surface by using key reference points contained in the digitized nail surface to automatically create new three-dimensional data along supplied parameters. The application of the invention results in a wide scope of possible implementations including a use for creating artificial fingernails and artificial toenails.
